#### DETAILED ACTION

## Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 10/30/02 has been entered.

## Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 3. Claims 1,2,9,10,18,24-26 are rejected under 35
- U.S.C. 102(b) as being anticipated by Penkethman made of record.

Penkethman shows in figs. 2 and 3 an optical apparatus including a laser light source (note col. 4 line 41)

Application/Control Number: 09/382,457

Art Unit: 2872

illuminating a fiber tip(210b), beam splitter (215--note that this lens acts to separate the two beams), and light receiving means(220b,230) near the light source, wherein return light is deviated by a small angle relative to 90 degrees from the incident light. Note that these elements may be said to form a "head."

The method limitations of claims 24-26 are inherent in the structure shown by Penkethman.

# Claim Rejections - 35 USC § 103

- 4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 5. Claims 11,12 and 44 are rejected under 35 U.S.C. 103(a) as being unpatentable over Penkethman.

Regarding claims 11 and 12, Penkethman shows the incident and return beams to be substantially parallel and coaxial with their respective beams before impinging upon the beam splitter in a similar manner as found in applicant's arrangement, but

Application/Control Number: 09/382,457

Art Unit: 2872

does not show the beam splitter to include a plurality of lenses of prisms. However, beam splitters including either prisms or multiple lenses are well known in the art. Use of such in Penkethman's device would have been obvious to the ordinarily skilled artisan at the time of invention as an art-recognized functionally equivalent means for providing separation of the two beams.

Penkethman shows the limitations of claim 44 as discussed above, but does specifically teach the returning light to be broader than the incident light. However, use of known illumination which would enable a broader return beam (either spatially or spectrally) would have been obvious to the ordinarily skilled artisan at the time of invention depending upon the type of imaging to be performed upon the specimen.

#### Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Mark Robinson whose telephone number is (703) 305-3506.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Cassandra Spyrou can be reached at (703) 308-1687. The fax phone number for the
